DETAILED ACTION

This application filed November 8, 2001, is a continuation of application 08/789,886, filed January 28, 1997, now abandoned.

Applicant's amendment filed August 20, 2004, has been received and entered. Claim 10 has been amended. Claims 11-17 have been added. Claims 10-17 are pending.

Election/Restrictions

Newly added claims 11-17 are dependent on claim 10, and are encompassed by the elected invention. Claims 10-17 are pending and currently under examination.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The claims have been amended to differentiate the claimed invention from that disclosed in the prior art. As acknowledged in the specification, methods of using adenoviral shuttle vectors, plasmids and helper cells were known and used in the art at the time of filing. The instantly claimed invention is differentiated from the methods known in the art at the time filing in that the shuttle vector and plasmid is heated to 35° -70° before it is transfected into the host helper cell. The specification teaches that this provides a better recombination between the vector and the plasmid. The prior art fails to teach or provide motivation for heating the composition containing the shuttle vector and plasmid before transfection. While the prior art teaches that heating was used to inactivate wild type viral particles in a preparation in

purification or inactivation protocols, there is no specific teaching to heat the composition of a plasmid and vector.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
